

JAVIC JUNIOR SCHOOL

10,000 IN FIVE GREEN INITIATIVE

Environmental Day BULLETIN

29th September 2017

Director's Message

The "Javic 10,000 in five-green initiative" is a Javic Junior School initiative that works towards nurturing young children to be environmental conscious. The initiative aims at planting 10,000 trees in 5 years. We target to use young children when they join Kindergarten to plant at least 1 tree per school term and to continue planting in 5 years. At Javic we believe that environment conservation is a commitment and when a child is nurtured on this direction, it will remain in his/her mind forever. Today marks the launch of this initiative and we look forward to partner with anyone with similar agenda

Tree Planting Event

Tree is life. This was the message that was passed during the fantastic Javic environmental day.

Conservation of our environment is a commitment and that is why Javic family has stated a journey with her title Kids for a greener future.

The event was graced by the Kisumu East sub-County administrator (Mr. Nicodemus Ochung'). On this day, Javic pupils took it up to be in the front-line in driving this initiative with each pupil planting at least one seedling at Obwolo Chiefs camp. We were honored to be received by the area chief (Mr. Tobbias Omollo). His commitment to support this initiative by providing security to the planted trees and daily monitoring was well received and gave hope to the program.

We are targeting opportunity areas within the community to drive this agenda to the end. To meet our objective, we expect to conduct one tree planting exercise in every school term with each student planting at least one tree.
